CORPUS / SOURCE REGISTER

BSE4104 EMERGING TRENDS IN SOFTWARE ENGINEERING

University Student-Support Case Agent

Group M Evening, Week 3

All sources verified and accessed as of 15 September 2026

This register lists every source document identified for the freshman-onboarding knowledge base, organized by topic. Each entry records the source's title, URL, publisher/domain, format, and notes on currency or scope. Sources are restricted to official Makerere University domains that are publicly accessible without login, consistent with the Project Charter's requirement to use only public, non-confidential source material.

Note on Source Freshness

The anchor source below (“Freshers’ Joining Instructions”) is published annually and is specific to the 2026/2027 academic year; Makerere releases an updated edition each year with revised dates, fees, and officers. This register reflects the corpus as of 15 September 2026. The current 8-week build does not include an automated mechanism to detect or ingest next year’s edition when it is published - this is a known limitation, and refreshing the anchor source (and re-verifying dates/fees against it) should be treated as a recurring maintenance task for any deployment beyond the current academic year, rather than a one-time corpus-building step.

Anchor Source

The following document was identified as the primary source for this corpus: it is official, current, and directly covers the majority of topics in scope. It is cited first here and referenced (rather than duplicated) under each topic it covers below.

Coverage Check

All 12 topics in scope for this corpus are covered by at least one verified, public, official source. Two topics originally considered - Clubs and Student/Guild Leadership - were deliberately removed from scope: no official public clubs directory exists for Makerere and guild leadership site – guild.mak.ac.ug, appears to not be operational anymore hence returns a 404 error. The university administration (Topic 10) however remains in scope and is fully covered by the Anchor Source.
